Smarter Heat Pump, Smarter Install

homely

The smart controller that makes heat pumps easy to set up and maintain

No more guesswork, just great installs

Auto-weather compensation
Homely removes the guesswork with auto-weather compensation, dynamically adjusting the flow temperatures to deliver comfort at the lowest cost.

Remote monitoring
Access your installs via Homely Connect, reducing call-outs and improving customer experience.

Hassle-free installation
Simple two-cable installation, makes set-up a breeze.

Reduces heat pump bills by 31%

As independently tested by the Energy House Labs facility at Salford University.

Lower running costs
Adding Homely can help reduce the ongoing running costs to be similar to or lower than a gas boiler.

Intuitive user app
Control temperature, set schedules, boosts and monitor heat pump status in real-time, from anywhere.

Effortless comfort
Homely prioritises comfort, learning and adapting to deliver the customer's chosen set-points, in the most cost-efficient way.

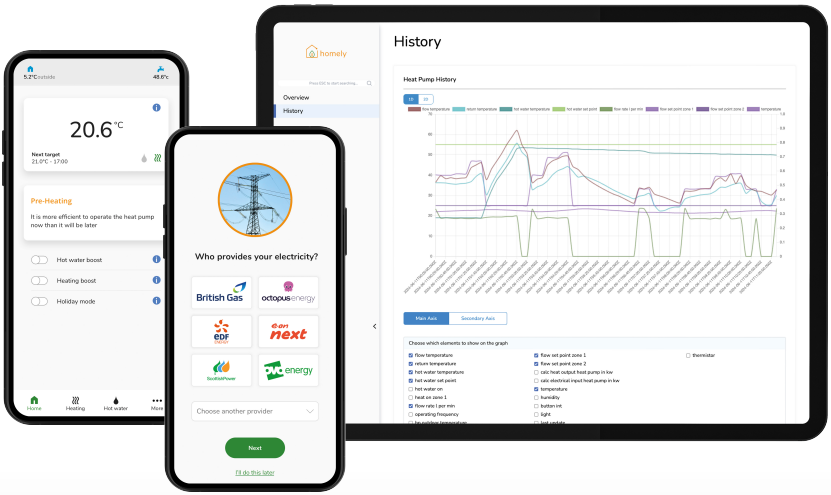

Homely works with leading brands

Homely is compatible with hundreds of models from leading heat pump brands - and we're continuously adding more!

How the Homely Smart Controller works:

Homely works by looking at multiple data points to deliver the best experience for your customers. This is done by considering data from the heat pump, the internal temperature (via the Homely Node), advanced weather forecasting, natural solar gains, additional heat sources and energy price to create a digital blueprint of the home.

Advanced algorithms use this information to dynamically adjust the flow temperature in order to maintain a comfortable internal temperature at the lowest cost possible. It's like a smart assistant that constantly monitors and optimises the heating system to be the best it can be.
