homely

Smart. Simple. Homely.

YOUR QUOTE EXPLAINED

You'll notice Homely on your quote...

In a nutshell, Homely is a smart controller designed specifically for heat pumps.

It helps your heating system work more efficiently, saving you money and keeping your home comfortable — all while reducing your carbon footprint.

Why has your installer recommended Homely?

Because Homely makes a real difference, think of it as sat-nav for your heat pump, it would still work without it, but not as efficiently.

- **Set it and forget it:** it's easy for you to set up and manage your hot water and heating schedules with the Homely app.
- **Saving you money:** Independent testing by Salford University shows Homely can save up to 31% per year on your heat pump bills. It's a no brainer.
- **Peace of mind:** Homely lets your installer keep an eye on your heat pump remotely, so they can resolve issues before they become problems.

What does Homely include?

When Homely is installed, you'll have a Homely hub which is connected to your heat pump and a temperature sensor which is placed in the room you use the most (not the kitchen).

What does Homely do?

After set-up, Homely learns about your home so it can run as efficiently as possible. As it works away in the background, Homely adjusts the heat pump's output to meet your required temperatures by taking into account weather forecasts, energy prices and other information.
