homely

Smart. Simple. Homely.

INTRO

What is Homely?

Homely is an intelligent heating control system purpose built for heat pumps. It uses an algorithm, incorporating weather forecasts, energy tariffs, solar gains, heat gains and losses and customer preferences to deliver greater comfort and lower heat pump bills.

Homely is great for customers because:

- They can save up to 31% on their heat pump bills.
- Takes the hassle out of managing their heat pump.
- Offers remote access to installers, removing disruptive repeat visits.

How Homely works

Designed with you in mind, Homely takes the hassle out of heat pump installations.

It's simple to install, with a Homely hub connected with 2 wires and a wireless temperature node placed in the homeowners most commonly used room. Once Homely is wired in, you can quickly set up the system using wifi and the Homely installer app.

With Homely up and running, your customer can set their preferences through Homely's easy-to-use app. Homely then adjusts the heat pump's output to meet their needs while taking into account weather forecasts, energy prices and other information.

Every Homely purchase comes with 2 years' Connect Pro included. With remote access you can:

- make parameter changes,
- monitor, diagnose and fix problems without returning to site.

Brands Homely works with:

Airwell, Clivet, Daikin*, Ebac, Grant, Ideal, LG, Midea, Riello, Samsung*, Trianco, Worcester Bosch

***Note:** to install Homely with a Daikin, you'll also need a Modbus adapter with a power supply.
To install Homely with a Samsung, you'll also need Samsung MIM-B19N board and MIM-B19N cables
